AXA

AXA
9-110-11

For each biker the right security

AXA is committed to optimally protect cyclist and bicycle on the road. AXA offers an extensive bicycle light and locks range. For each bike and cyclist AXA has the right locks and lighting to give you a safe feeling.

AXA Bike Security

For more than 115 years, the company has made every effort to convert the latest requirements and developments into userfriendly, sustainable products. And thanks to our own production facilities in Europe, AXA can always guarantee constant high quality.

Shelf advise

For the bicycle dealer, we offer solutions for a well organized shop design. We like to help you to present your shop as well as possible. There are various display modules available which stimulate upselling.

We are always available

For information about our products or other issues please call one of our retail specialists:
+31 (0)318 536 220 or send an e-mail to:
info.axa.bike@allegion.com

Index

AXA Product range

10-35 AXA Lock range

The AXA lock range is very diverse and has a suitable lock for each bike. Our safe locks provide optimal protection for long and short term parking.

37-58 AXA Lighting range

Visibility is an absolute must if you participate in traffic. The AXA lighting range complies with the latest requirements in the field of safety and light output.

‘You opt for AXA,
you opt for safety!’

Choose the right safety level

To help you understand your choice AXA classifies locks by security level. Level 1 represents the lightest cable lock with level 15 offering ultimate protection for your bike. These locks are often approved by 3rd party testing agencies, and are therefore a preferred option when taking out bike insurance.

STANDARD SAFETY

Safety level 1 to 6

Locks with a security level between 1 and 6 are more suited when securing your bike for a short time, in an area where there is a lot of activity and the chance of theft is low.

ADVANCED SAFETY

Safety level 7 to 10

These locks are perfect to use as a second lock for bikes that are parked at school or at a very busy place. Bike thieves often have 1 specialism so they are more likely to leave a bike with two locks.

PREMIUM SAFETY

Safety level 11 to 15

These locks are all approved and are a preferred option considering bike insurance. These locks are very strong and reduce the chance of theft immensely. They can be used for expensive bikes that are parked for a longer time or in the city.

Your new key, safely and quickly

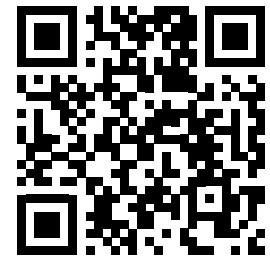

It can happen that someone lost his bicycle key.
This is not a problem! An extra key can be ordered
via our key service website.

An extra key can be ordered through:

axabikesecurity.com

Delivery will be within a few days. Dealers can
create their own account and ordering multiple
keys at once. AXA is the only supplier who
produces and sends keys themselves. This
means we can offer fast service and
security.

VIDEO

TIP:

Note down your
key number,
you will need it
when ordering a
new key.

Approvals

ART-quality mark

Our locks are mostly ART approved. This makes them
suitable for closing a bike insurance. The more stars
a lock has, the higher the preventive value of the lock
and it ensures you that the risk of theft decreases
significantly.

European approvals

Requirements on approvals can differ per
country, based on variables such as used theft
methods and weather conditions. Check the
website for the up to date status on approved
locks of the institute for your country.

AXA Cargo assortment

A cargo bike is a super convenient means of transport. It is used to bring the children to daycare or do the grocery shopping.

But due to the high purchase price, it is also a popular object for thieves. In order to prevent theft, it is highly recommended that a strong (ART approved) lock is used. Not every lock is suitable for a cargo bike. Some of them are too short to secure the bike to a pole or fence.

AXA has a special range of locks for cargo bikes. Below we highlight a few products.

180 CM LONG CHAINS

AXA Linq series

The Linq and the Linq City have a length of 180 cm. The Linq has an ART 2 star approval and is therefore suitable for taking out bicycle insurance Close. The diameter of the links is 9.5 mm. The diameter of the Linq City is 7 mm. This makes it a lighter version.

110 CM CHAIN WITH PADLOCK

AXA Loop

The Loop has a length of 110 cm and has a ART2 star approval. Because the chain is on 2 ways to use is maximize your length of the chain. Thanks to the loose padlock you are flexible how you attach the chain.

1 Normal use

2 Maximum use of the length

AXA Floor anchor

We see more and more that a shed or garage box is broken into. It is important to secure the bicycle to the fixed world in these places as well. This can be done with an anchor. The anchor can be mounted on the wall or floor. With the 2nd lock, the bicycle can then be attached to the steel bracket.

Cargo Shelf

To present our locks and lighting range for cargo and to be able to present cargo bikes well in the store, we have developed a shelf for this. It contains the optimal selection for your store and helps consumers make the right product choice. If you are interested, you can contact our retail specialists, they will be happy to help you!

AXA E-bike product range

Anchor your E-bike to a fixed object

It is very important to anchor your E-bike with a 2nd lock to a fixed object. Such as a bicycle rack, lamppost or a fence. The combination of an approved frame lock and a chain makes it impossible to move your E-bike to a remote place in order to break the locks.

Always use a 2nd lock

The importance of a 2nd lock is often underestimated. Breaking open 2 locks with a separate cylinder takes too much time for a bicycle thief. As a result, bicycle thieves will ignore your E-bike sooner than a bicycle without a 2nd lock. Always fasten the 2nd lock high on your E-bike and not on the ground, this allows less force to be applied in the event of an attempted theft.

Let yourself be seen, light your bike!

We regularly see cyclists riding without lights. They think they will be seen, but without lights they're not or hardly visible.

Check the voltage

For E-bikes, we have special lighting that can be connected to the battery of the E-bike. Every E-bike has a different voltage battery. So it's important to check the voltage before purchasing new lighting.

Secure the frame lock to the fixed world

Many of our frame locks are equipped with the possibility to include a plug-in chain or cable. With this plug-in chain the bicycle can be connected to the fixed world. This is an additional barrier for bike thieves since they can not easily move your bicycle to a less visible area to break the lock.

Which plug-in chain or cable fits on what frame lock

■ Yes ✗ No NOTE: ULC and UPI fits together with other lock manufacturer frame locks

Retractable

You will see the term 'retractable' on certain frame locks. What does this mean?.

As standard, AXA supplies its frame locks with a non-removable key ('non retractable'). This means that if the lock is unlocked, you can never remove the key from the lock. This is the most commonly used version in the Benelux. 'Retractable' indicates that it is a variant in which you can remove the key from the lock in both the unlocked and locked state. We often see this method in large parts of Scandinavia and German-speaking areas.

PLEASE NOTE: Insurers' requirements regarding 'retractable' and 'non retractable' differ per country.

Bike lights range

Choose the right light

In the AXA product range brochure different terms are used to term product features. In order to be able to make a good estimate of the product you need, it is therefore useful to know what these terms means. Below you can find a brief description of some product features.

Light output

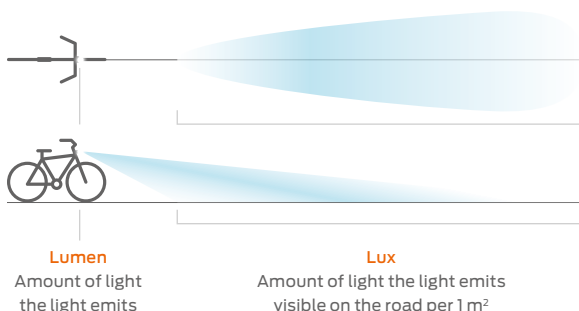

35 LUX

In the lighting industry, there are two terms that can be used to indicate the brightness of a light, namely Lux and Lumen.

What is the difference between Lux and Lumen?

In the lighting industry, there are two terms that can be used to indicate the brightness of a light, namely Lux and Lumen. The difference between Lux and Lumen is the way the amount of light is measured. Lumen is the amount of light which the light emits from the source per time unit, regardless of where the light radiates. Lux, on the other hand, is the amount of light that falls on a surface, for example on a square meter.

At AXA, the number of Lux of a lamp is mentioned on almost all products. This term indicates how much light is projected onto the road and therefore how much visibility you experience. The exception confirms the rule: the AXA Solis 800 is a headlight with 800 lumens. Suitable for wide light dispersion, such as when cycling in a forest.

Steady light function

Different dynamo front and rear lights are equipped with the steady light function and it ensures that your bicycle light keeps shining up to 4 minutes when stopping for example at a traffic light. This provides additional visibility on the road, even if you don't ride!

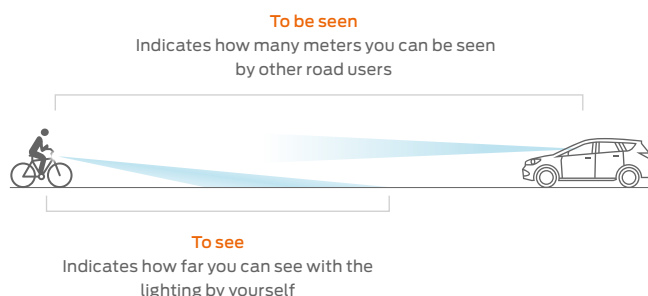

What does 'To see' and 'To be seen' stand for?

When you are cycling and participating in traffic, it is important to both see well by yourself, as to be seen by other road users. For this reason in this brochure a distinction is made between "To see" and "To be seen".

"To see" indicates how far you can see with the lighting by yourself. This lighting is mainly used by cyclists who are often cycling on poorly lit roads and use the light to have a good view of the road.

"To be seen" indicates how many meters you can be seen by other road users. This lighting is especially useful when you are cycling in the city and want to be seen on well-lit roads.

Daytime safety light

AXA's daytime safety light not only ensures good visibility in the evening, but also good visibility during the day. AXA's daytime safety light offers you this security because during the day, two extra bright Led's make sure you remains visible even with sunlight.

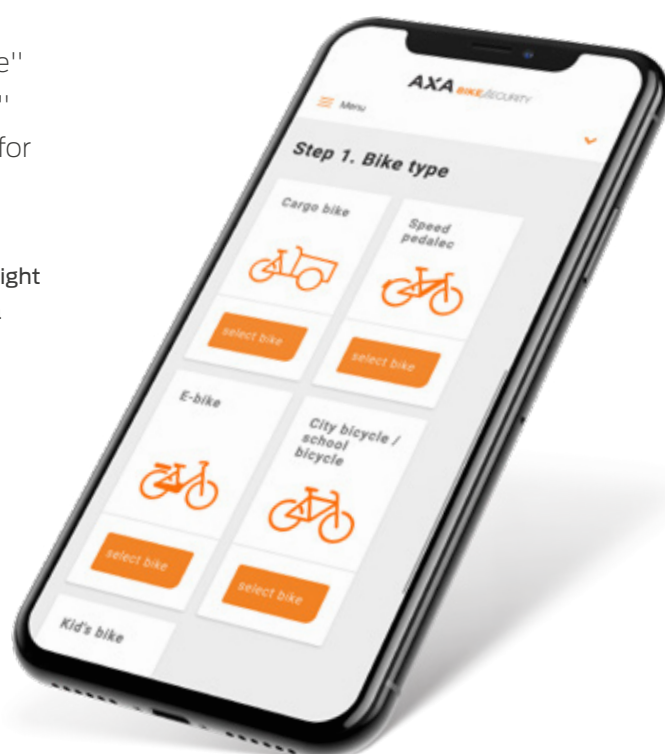

Always recommend the right bicycle light!

We are happy to help you with advice on the best bicycle light. AXA has a wide range of lighting products, from very powerful "to see" lights, to widely visible and safe "to be seen" lights. AXA has the perfect lighting solution for each bicycle and cyclist.

To make it easy for you, we have created the bicycle light selector. This online tool takes you in three steps to a choice that is tailored to your specific needs.

Scan the QR-code to get started!

National certifications

AXA offers a wide range of high-quality bicycle lighting. In this catalog, you will see the mention of the German StVZO or French Approval certification for various products. A brief explanation is provided below.

StVZO

The StVZO is the German road traffic regulation that sets special requirements for bicycle lighting. In Germany, the use of bicycle lighting that complies with the StVZO requirements is legally mandatory. This means that if you cycle in Germany, you must use a bicycle light that meets these regulations. However, it is also advisable to use a bicycle light that meets these requirements even if you are not cycling in Germany.

French Approval

Similar to the German regulations, in France, there is the "Code de la route" for bicycles. Just like in Germany, bicycle lighting in France is tested in an independent laboratory, and a bicycle light with approval complies with the French legal requirements.

RKF certification

In the Netherlands, we use the RKF certification. This certification provides clarity in the maze of bicycle lighting. It indicates that the lighting not only ensures that you are seen but also allows you to see well. The AXA bicycle lighting with the StVZO certification meets the requirements of the RKF certification.

Video

Watch more tips and advice

Do you want to know how to adjust the code of a code lock, or do you want extra information about one of our products, watch one of our videos below. In addition, we have videos with tips for securing your bike and in which the difference in lights is explained.

If you are interested to show the videos on your own website please contact your account manager or the sales support department at **+31 (0)318 536 220**. We can send you the original video.

Shelve advice

An AXA shelf advice makes your shop professional, well organised and helps your consumer to decide faster and to make the right choice. AXA has shelf advice for each store. We are pleased to share the success examples with you personally.

How do you get the best return from your shelf space?

- Optimal selection for your shop
- Clear and clarity for consumers
- Shelf advice based on expected revenue and return
- Right facings per category
- Easy up-sell opportunities
- Order list per shelf

Tego wall

Workplace shelf

Optimal presentation of AXA products

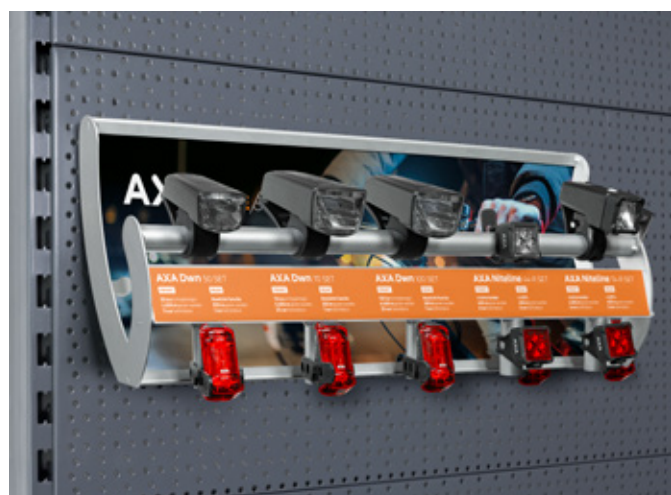

AXA offers a variety of display modules, such as the Fold Ultra display and the USB rechargeable lights display, so that consumers in your store can see the products without packaging. This will stimulate upselling and gives the consumer a good sense of the products. Different holders and wobblers can help imagine the products in the shelf.

Quick delivery

At AXA you are assured of a fast and reliable delivery. We strive to place your shelf within two weeks.

AXA Bike Security

AXA Bike Security is inextricably linked to cycling culture. For more than 115 years, the company has made every effort to protect cyclists and their bikes. As a genuine bike fan, AXA Bike Security knows exactly what cyclists need to safely and confidently take to the road.

Our engineers convert the latest requirements and developments into user-friendly, sustainable products. And thanks to our own production facilities in Europe, AXA can always guarantee constant high quality. This way AXA contributes to the safety and pleasure of the growing worldwide group of people who embrace the bike as a healthy and sustainable means of transportation.
